

## Instructions Temporary Tattoo Paper

You need a **pair of scissors, cotton balls, water and the two different sheets you received:** a clear decal tattoo paper sheet (with text "Inkjet/Clear waterslide decal paper" or "Inkjet Tattoo Paper Printing Paper" on the back) and an adhesive sticker sheet.

1. **Arrange the designs** with any graphic software program on a page (size 10.5x15 cm - 4x6 inch). Don't forget to **mirror the images if necessary** (always mirror names, texts, numbers, banners and any other design that is not symmetric).
2. It is recommended that you **print your design on a plain paper first** (size 10.5x15 cm - 4x6 inch) before using the waterslide removable tattoo paper.

### REMARK:

The water slide temporary tattoo paper should be fed into your printer **one sheet at the time**. You should also **remove all other paper** from your printer. This is to avoid a paper jam in the printer because the tattoo paper is thicker than regular print paper.

3. Print on the **glossy side** of the decal tattoo paper.
4. Wait until the ink is **fully dry** (2 - 3 minutes).
5. **Remove the front side** of the adhesive sticker sheet.
6. **Apply the adhesive sticker sheet** to the printed side of the tattoo sheet. Be sure to **remove all air bubbles**.
7. Use scissors to **cut around each individual tattoo** design, as close as possible to the design.
8. **Remove the adhesive backing** from the tattoo paper.
9. **Apply the tattoo on your skin** and press firmly for 20 seconds. The skin must be clean, dry and free of hair.
